**\*LIFTED\* BOIL WATER ALERT –  
SELECT AREAS OF MORLEY, ELM, HIGH, AND CLARK STREETS IN  
GRAND LEDGE**

GRAND LEDGE, MI, Sunday, November 14, 2021, 7:00 PM –

The City of Grand Ledge issued a boil water advisory on Friday, November 12, 2021, for a select area of residents due to a water main break on Morley Street, near Elm Street, in Grand Ledge. Water samples were drawn late Friday and testing was conducted at the City’s Department of Environment, Great Lakes & Energy (EGLE) certified laboratory to ensure water meets State of Michigan standards. The results of those initial water samples are complete following a required 24-hour testing period and were found to be non-detect. A second round of water samples were drawn late last evening, as required, 48-hours after the initial samples were taken. **The tests results, in compliance with the State of Michigan, indicate that the water is safe for use and effective immediately the boil water advisory has been lifted.**

**BOIL WATER ALERT LIFTED**

NOV. 14 2021 - EFFECTIVE IMMEDIATELY:  
The Boil Water Alert for the selected area around Morley Street has been **LIFTED**.  
Please refer to [CityofGrandLedge.com](http://CityofGrandLedge.com) for further updates.

**ALL CLEAR** Previously Affected Boil Water Alert Areas

***What should I do now in my home or business?***

Construction activity may have been disturbed sediments that have naturally accumulated in water mains, service lines, and your home plumbing. Residents and businesses in the identified area are advised to flush their plumbing to remove any such debris and to check faucet aerators where those particles may be captured.

***When I turn on the faucet, the water sputters. Why?***

You may have air in the plumbing lines. Turn your tap on slowly and run the water until the sputtering stops.

***The water is discolored. What should I do?***

Flush your lines by running water until the discoloration has cleared. The water is safe, and discoloration is caused by naturally occurring sediment that may have been disrupted.

***Why does my water have a strong smell?***

The smell is most likely chlorine. Often, water systems will increase chlorine levels to disinfect the pipes in home plumbing.

***Do I need to clean out my faucets?***

Yes. You should flush your faucets after the boil water advisory.

***My refrigerator has a water dispenser/ice maker. Do I need to clean them?***

Yes. Water dispensers and ice makers are connected to your water line. You need to flush and clean them. Follow the directions in the owner's manual.

***Do I need to do something for the water softener?***

Yes. You may need to run through a regeneration cycle. Follow the directions on the owner's manual.
